LITHUANIAN UNIVERSITY OF HEALTH SCIENCES

International **Summer School** Practice

Natural anatomy specimen restoration and care/or natural anatomy dissection and preservation practice.

There are two options to choose from during the practices in Anatomy Laboratory.

No.1 Anatomy Specimens restoration old and new.

Student can learn how to take care of anatomy specimens: chemical solutions to be made for long term preservation and care of the specimen containers.

No.2 Cadaveric material management.

Student can learn how embalming works. Practice dissection of cadaveric material with care. Requirements for cadaveric specimen to stay preserved for extended periods of time - so that dissected material could last as a studying material for multiple study years.
